(54) **SILVER HALIDE PHOTOGRAPHIC SENSITIVE MATERIAL**

COPYRIGHT: (C)1997,JPO

(57) Abstract:

PROBLEM TO BE SOLVED: To enable optional color dyeing of a specified layer and to improve decolorability in rapid development processing without adversely affecting the photosensitive material by incorporating a dye reactive with a specified color developing agent.

SOLUTION: The photosensitive material contains the dye reactive with the color developing agent represented by the formula in which A is an acidic nucleus; X is an O or S atom; each of R₁-R₃ is, independently, an H atom or a substituent and R₁ and R₂ may combine with each other to form a ring; each of L₁-L₃ is a methine group; and (n) is 0, 1, or 2, and the formula has at least one of carbamoyl and sulfamoyl and sulfo-amino groups, thus permitting this silver halide photographic sensitive material to contain the novel diffusion resistant dye capable of optionally dyeing the specified layer and improving the decolorability of rapid development processing without adversely affecting the photosensitive material.
